

## MinMod

### MinMod: A 3rd Generation Kiosk for Mission Critical Applications

#### MinMod: Minimal Footprint, Modular Design

MinMod is a high-quality kiosk for both small and large scale deployment in un-supervised public environments. MinMod is priced for budget-conscious buyers who still require a kiosk that is fully-functional, ADA compliant, rugged and attractive. MinMod perfectly balances a minimal footprint, ample interior space, robust construction and attention-getting style. The unique modular construction provides owners with total freedom to change plans and implement new technologies.

Modular design also simplifies service and upgrades. The kiosk modules are field swappable and sized to ship easily.

Even the face of MinMod changes! Graphic and or architectural facings can be swapped in minutes.

Best of all, modularity means the kiosks you buy today will remain in service for many years, regardless of technological change!
